SOFTWARE ENGINEER

Catania, Italy | +39 375 701 8317 | davide.rododave.dev | pdave.dev | github.com/PhantomDave | linkedin.com/in/davide-rodo

Full Stack Software Engineer specializing in .NET and Next.js/React, building monitoring platforms for the renewable energy sector — currently on an Asset Performance Management system covering several GW of assets across Europe and Asia. Experienced in cloud architecture on Azure and AWS, infrastructure automation with Terraform, and containerized deployments with Docker and Kubernetes. Background in leading a small development team and modernizing legacy codebases.

EXPERIENCE

Bax Energy

R&D Software Engineer

Acireale, Italy · Hybrid

Apr 2024 – Present

- Develop full stack features in C# (.NET) and Next.js/React for an Asset Performance Management platform monitoring several GW of renewable energy assets across multiple countries in Europe and Asia.
- Design and implement REST and SOAP APIs powering client-facing analytics and third-party integrations.
- Provision and manage Azure and AWS infrastructure with Terraform, replacing manual environment setup with reproducible, version-controlled deployments.
- Containerize services with Docker and orchestrate them on Kubernetes, standardizing deployments across environments.
- Optimize services and database queries to improve platform responsiveness under production load.
- Work in cross-functional Agile teams of ~6 engineers, scaling to roughly 50 contributors at peak on the platform's largest delivery cycle.

Software Engineer

Jan 2024 – Mar 2024

- Maintained and extended legacy components of the Asset Performance Management suite for renewable energy operators.
- Built integrations with Microsoft Teams and GitHub to automate notification and alarm handling, removing manual triage from the team's daily workflow.
- Worked across Angular, Next.js and .NET Framework, integrating REST and SOAP services deployed on Azure and AWS.

Voxel Entertainment ApS

Remote

Software Engineer / Team Lead

2019 – 2023

- Led a development team of 4 engineers and managed a player community of approximately 1,000 users.
- Developed complex multiplayer gamemodes in C# and JavaScript, including backend services and REST APIs.
- Built websites and User Control Panels in PHP, both plain and on WordPress.
- Migrated the codebase from .NET Framework to .NET Core and administered the Linux cloud servers running the platform.

SELECTED PROJECTS

- South Valley Roleplay** — GTA V roleplay server gamemode engineered end to end in C#, covering backend systems, REST APIs, Docker deployment and CI/CD, while mentoring contributors.
- Money Tracker** — personal finance tool with a Python backend and Angular frontend for tracking day-to-day expenses (github.com/PhantomDave/wheremoney).

EXPERTISE

LANGUAGES

C#, TypeScript / JavaScript, SQL, PHP, Python, Java, C / C++

FRAMEWORKS

.NET / .NET Core / .NET Framework, Next.js, React, Vue, Angular

CLOUD & DEVOPS

Azure, AWS, Terraform, Docker, Kubernetes, Git, CI/CD

PRACTICES

REST & SOAP API design, Agile / Scrum, legacy modernization, code review & mentoring

SYSTEMS

Linux, Windows

EDUCATION

2023

Full Stack Developer Course
Free Mind Foundry — Acireale

2017

High School Diploma
IPSSEA “Karol Wojtyła” — Catania

LANGUAGES

Italian	Native
English	C1
